

FastVote™

FastVote™ Solves Your Line Issues Easily and Affordably

FastVote is a Virtual Queueing System that allows voters to remain off site and virtually wait for their turn to vote. Inspired by Disney's FastPass™, the free FastVote App allows voters to hold a place in a virtual line at their their polling place. When the voter's place in line reaches the front, they receive a notification and are able to vote quickly.

- FastVote works because *waiting goes faster when you're not standing in line*. Voters are free to pursue personal and professional endeavors until it is their turn to vote.
- FastVote eases voting equipment and staff requirements, resulting in a large net cost savings.
- FastVote features Early Voting and Election Day options.
- FastVote displays virtual lines at multiple locations to better apportion voter traffic and even lets voters get directions to their polling place.
- FastVote is fully customizable to meet your county's needs.
- FastVote changes media and public perceptions, because physical lines at polling locations will be significantly shorter, thereby mitigating negative news stories.

PRICED AT ONLY CENTS PER REGISTERED VOTER
